And dealing with data within tables

I finished some courses in the field, I also have sufficient knowledge in OOP and deal with mobile and web applications

Projects

2024/05 – 2024/08

Exhibition_city

An exhibition that includes many departments and companies

A project that allows company owners to enter and register within the exhibition in order to display the company's products, add discounts to some of their products, add events, and place their new products as a trend via the web.

While the user is allowed to view products and purchase products via the electronic wallet

It also displays trend products and offers on the homepage so that everyone can see it

It also allows the user to follow companies, so this feature allows messages to be sent to the user if companies add any offers or events.

2024/01 – 2024/03

pharmacy

Pharmaceutical warehouse management application

It works on adding medications to warehouses, where each pharmacist performs an inspection of the warehouse and requests an order from the warehouse that includes all types of required medications.

The order is in the form of Delivered, Received, and Paid

As it has many advantages, if a specific order is taken from the warehouse, it reduces that order from the warehouse

Pictures of medicines and their details are displayed in the warehouse:

Scientific name, trade name, classification, manufacturer, available quantity, expiry date, price.
